

# Multimodal Sentiment Analysis of Instagram Posts

---

ETANA DISASA

MS IN DATA SCIENCE

REGIS UNIVERSITY

# Introduction

---

Social media platforms such as Instagram host vast amounts of user-generated content combining images, text captions, and comments.

Understanding public sentiment from these multimodal posts is vital for brands, researchers, and individuals seeking insights into content perception and emotional tone.

Traditional sentiment analysis has focused on text alone, missing the nuanced meaning conveyed through visual content.

Instagram posts are **multimodal**: images + captions + comments.

Traditional sentiment analysis focuses on text alone.

**Need:** Integrated tools to understand public perception, emotional tone, and unfavorable sentiment.

This practicum addresses the need for integrated multimodal sentiment analysis tools by developing a proof-of-concept interactive application that processes Instagram posts to extract and analyze their sentiment in real time.

# Introduction

---

Social media enables toxic content and negative emotional contagion.

Research Question: *How can a multimodal sentiment analysis system be developed to analyze Instagram post content (images, captions, comments) to provide post sentiment that helps identify harmful content?*

The purpose of this project is to develop an interactive tool to analyze Instagram posts' sentiment (image, video, caption, comments).

# Introduction

---

## Approach:

NLP (Natural Language Processing): For analyzing captions, comments, and image descriptions using BERT and emoji handling.

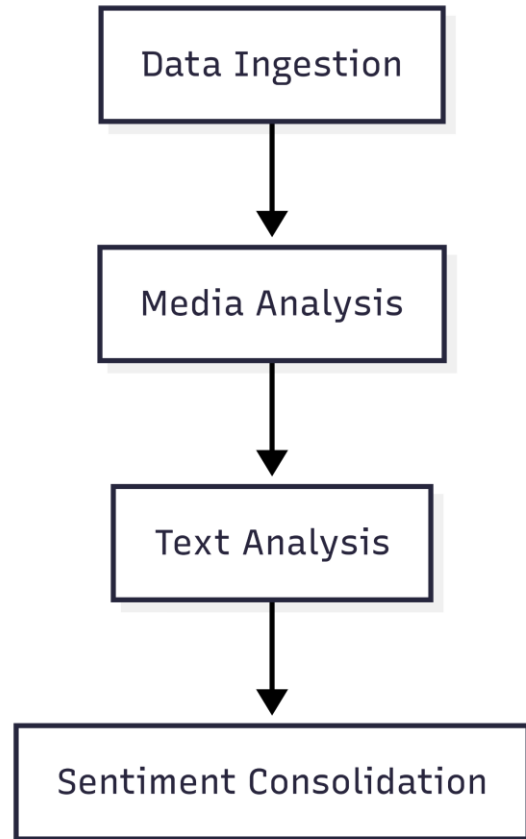

Computer Vision: For analyzing images and video frames, including face emotion detection and NSFW filtering.

Multimodal Fusion / Data Integration: Combining text and visual signals into a single sentiment/emotion output.

**Outcome:** Real-time insights; supports mental health research, brand monitoring, social media analysis.

# Methodology

---

**Step 1:** Data Ingestion – Collect images, video frames, captions, and comments from Instagram posts.

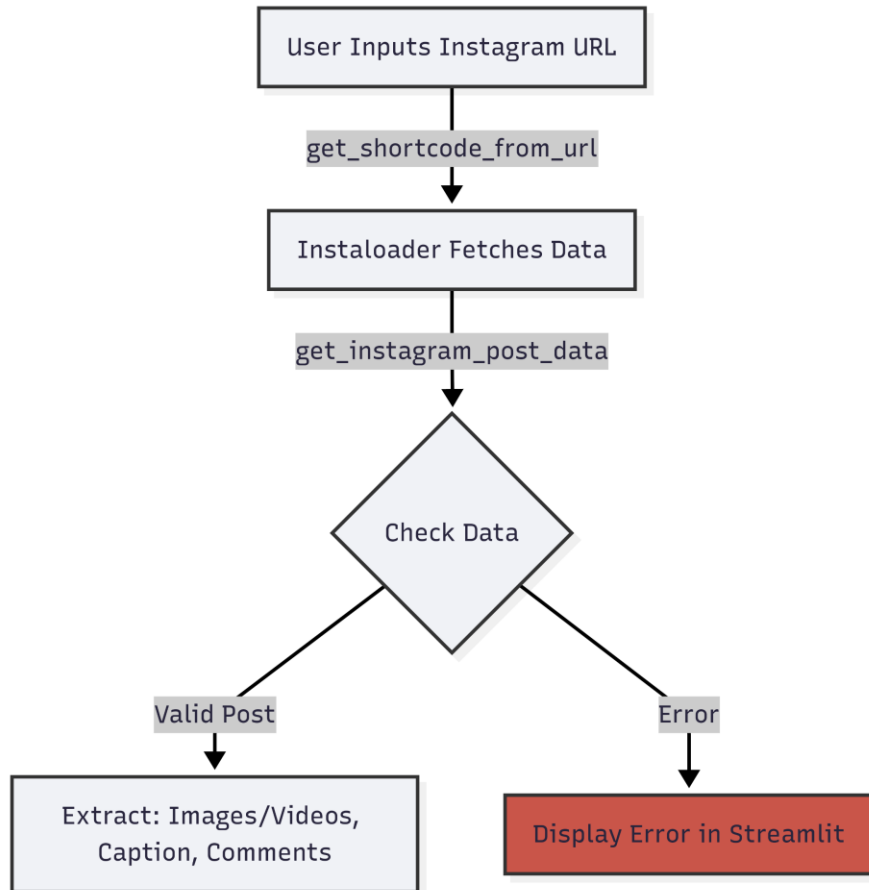

**Step 2:** Media Analysis – Filter NSFW content, detect faces, generate image descriptions, and analyze face emotions.

**Step 3:** Text Analysis – Analyze sentiment of post captions and top 5 comments.

**Step 4:** Sentiment Consolidation – Combine media, caption, and comment sentiment into a final post-level sentiment (weighted 50% media, 30% caption, 20% comments).

# Methodology

---

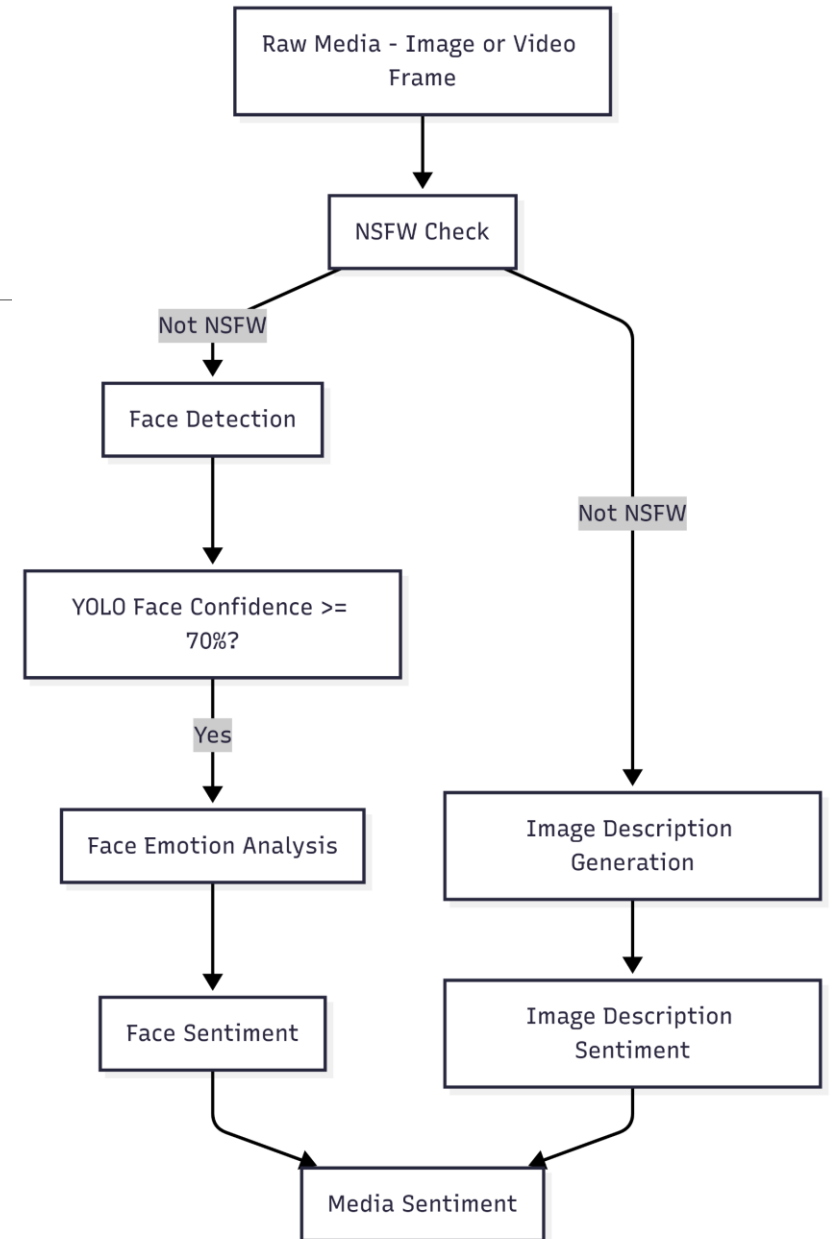

## Step 1. Data Ingestion

- User enters a valid Instagram URL to collect public post data.
- Checks Data and validates the link.
- Shows an error if the post is invalid.
- If valid URL is valid, images, videos, captions, and comments (top 5) are extracted for analysis.

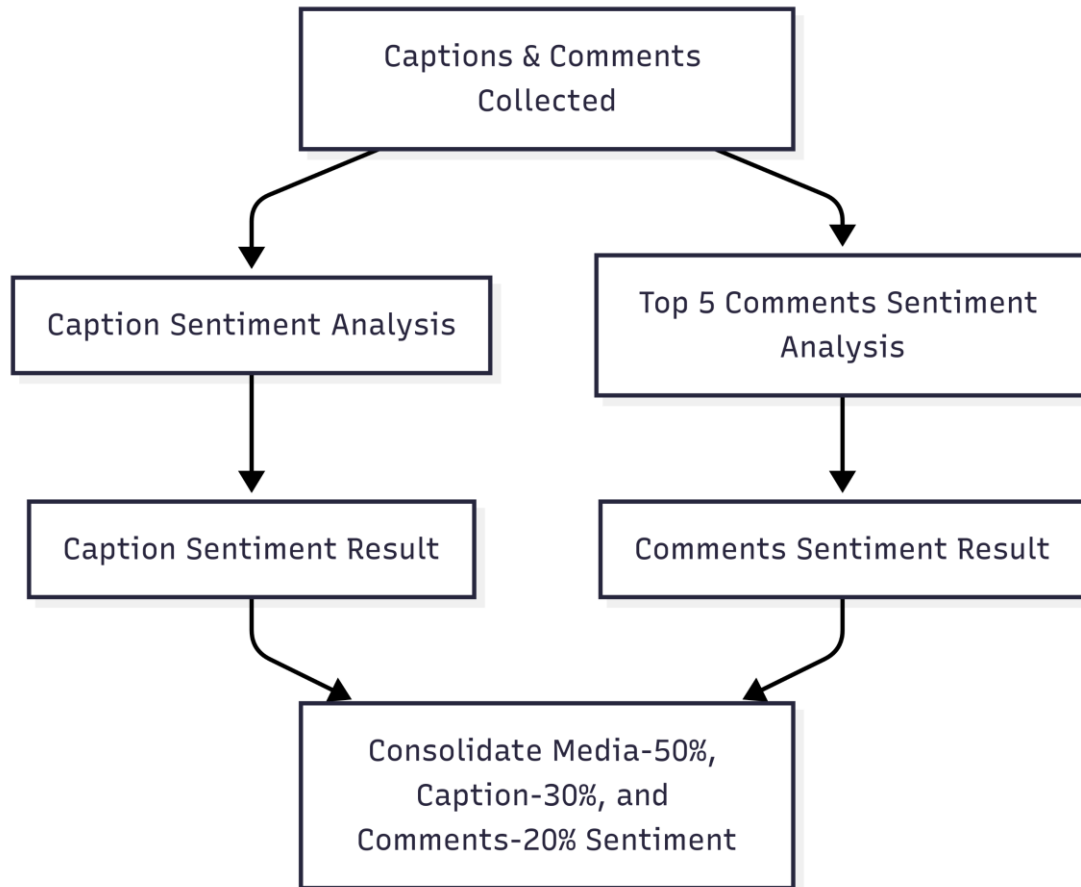

# Methodology

## Step 2. Media Analysis

- Run NSFW check on all media; skip inappropriate content.
- For non-NSFW media:
- Generate image descriptions.
- Detect faces and run YOLO confidence  $\geq 70\%$ .
- If a confident face exists, perform face emotion analysis.
- Consolidate face sentiment and image description sentiment into media sentiment.

# Methodology

## Step 3. Text Analysis

- Caption Sentiment analyzed using pretrained BERT (bhadresh-savani/bert-base-go-emotion) model.
- Top 5 Comments first demojized (emoji library) to better analyze sentiment from emojis.
- Emotion analysis from Media, Caption and Comments consolidated.

## 4. Sentiment Consolidation

- Emotion and Sentiment standardized
- Data passed for visualization

# Tools Utilized

---

## Data Retrieval & Processing:

**Instaloader:** Collect Instagram posts, captions, and comments.

**OpenCV:** Extract video frames as images for analysis.

## Computer Vision / Image Analysis:

**YOLOv8:** Face detection for emotion analysis.

**BLIP-2:** Generate descriptive captions for images and video frames.

**Pretrained Face Emotion Model:** Detect emotions from faces.

**NSFW Model:** Filter inappropriate images.

## Natural Language Processing (NLP):

**BERT (pretrained models):** Sentiment analysis for captions, comments, and image descriptions.

**Emoji Library:** Convert emojis to text for sentiment interpretation.

## Deployment & Utilities:

**Streamlit:** Build an interactive app for input and results display.

**Python Libraries:** Pandas, NumPy, Matplotlib / Seaborn for data handling and plotting.

# Example Posts

## Instagram Post Emotion Analyzer

Analyze emotions/sentiments in Instagram posts through media, captions, and comments using AI

🔗 Enter Instagram Post URL:

<https://www.instagram.com/p/DNjCzE7MrpD/>

 Analyze Post

- Regis University's Instagram page posted this post.
- The link is copied from browser as [https://www.instagram.com/p/DNn\\_uSsx5xJ/](https://www.instagram.com/p/DNn_uSsx5xJ/)
- The streamLit UI allows user to enter it.

- A brief overview including the type of media posted (Image, Video), number of comments,
- Like and number of media posted is featured.
- Furthermore, an excerpt from the caption of the post is presented.

# Example Posts

## Media Analysis

IMAGE-DNN\_USSX5XJ-1

IMAGE-DNN\_USSX5XJ-1

AI Generated Description: Two girls are standing next to a bag

Sentiment: NEUTRAL (0.96 confidence)

Face Analysis:

Faces detected: 2

- HAPPY: 2 face(s)

Overall Image Emotion from Face Analysis: HAPPY (1.00)

IMAGE-DNN\_USSX5XJ-3

IMAGE-DNN\_USSX5XJ-3

AI Generated Description: Two women in blue shirts and black shorts are walking through a park

Sentiment: NEUTRAL (0.96 confidence)

Face Analysis:

Faces detected: 2

- HAPPY: 2 face(s)

Overall Image Emotion from Face Analysis: HAPPY (1.00)

IMAGE-DNN\_USSX5XJ-5

IMAGE-DNN\_USSX5XJ-5

AI Generated Description: Two men in a hallway with

IMAGE-DNN\_USSX5XJ-2

IMAGE-DNN\_USSX5XJ-2

AI Generated Description: A group of people walking down a sidewalk

Sentiment: NEUTRAL (0.53 confidence)

Face Analysis:

Faces detected: 4

- HAPPY: 3 face(s)
- SAD: 1 face(s)

Overall Image Emotion from Face Analysis: HAPPY (0.83)

IMAGE-DNN\_USSX5XJ-4

IMAGE-DNN\_USSX5XJ-4

AI Generated Description: A group of people standing outside of a house

Sentiment: NEUTRAL (0.68 confidence)

Face Analysis:

Faces detected: 3

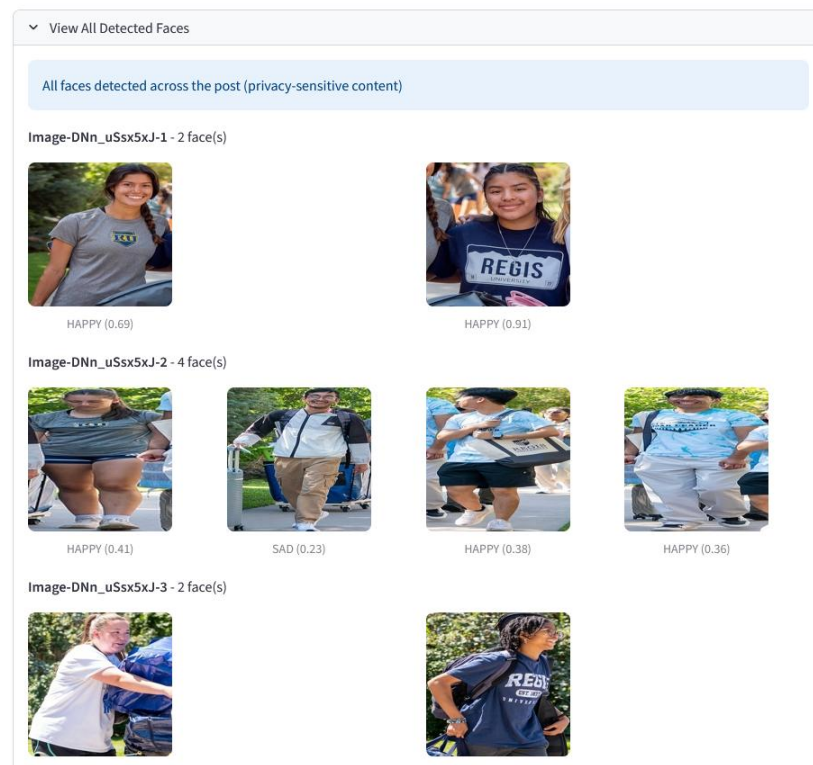

- HAPPY: 2 face(s)
- SURPRISE: 1 face(s)

Overall Image Emotion from Face Analysis: HAPPY (0.75)

- If an image/video is appropriate to analyze, a thumbnail of images (pictures or an image from a video) will be populated.
- For each image, an image caption with the unique Instagram ID will be associated.
  - E.g. IMAGE-DNJCE7MRPD-1
- AI Generated Description will be generated.
- Sentiment analysis from the generated description will be displayed.
- Face Analysis shows how many faces detected and emotions captured.
- An overall weighted media sentiment will be displayed for each media.

# Example Posts

## Detected Face Images

- It will also allow the user to view all detected faces, emotions captured and confidence point.
- This allows the user to pick on details that may not be visible at a first glance and provide a robust face recognition mechanism.
- To avoid mis-capturing faces, the YOLO model was set to pass at least a 70% confidence rate for a face to be included in the analysis.

### Caption Sentiment ↔

Yesterday, we welcomed our newest Rangers as first-year students moved in with the help of their families, Regis student athletes and faculty and staff — even our Interim President, Fr. Hendrickson, joined the crew! 🏠 📦

“Regis is where discovery, growth, inspiration and creativity thrive,” said Fr. Hendrickson. “As we begin the journey of this new school year, we do so rooted in our mission and informed by faith, seeking compassion and furthering our commitment to justice.”

We can't wait to see our returning students back on campus this weekend. Let's do this, Rangers! 🇺🇸  
📺 #RegisUniversity #ThisIsRegis #JesuitEducated #RangerWelcome #HigherEd #MoveIn #Fall2025

Sentiment

NEUTRAL

↑ 0.71

### Comments Analysis

good.grades\_\_assignment: ❤️ ❤️

NEUTRAL (0.36)

- Captions and comments are analyzed.
- To capture a truer sentiment from comments, emojis are converted to text before being analyzed.
- Caption sentiment and comment sentiment are listed accordingly.

# Example Posts

## Overall Post Emotion/Sentiment Summary

Dominant Emotion

# Project Contributions

---

- **Multimodal Analysis:** Integrated image, video, captions, and comments into a single sentiment/emotion pipeline.
- **NSFW & Face Filtering:** Automatically filtered inappropriate content and detected face emotions to improve accuracy.
- **Text Sentiment Insights:** Analyzed captions, comments, and image descriptions using pretrained BERT models, including handling emojis.
- **Media Description:** Generated descriptive captions for images and video frames using BLIP-2 for richer text-based analysis.
- **Consolidated Sentiment:** Weighted combination of image, face, media, caption, and top comment sentiments into a final summary.
- **Reusable Workflow:** Demonstrated a reproducible methodology for multimodal social media analysis with Streamlit deployment.

# Ethical Considerations

---

## Privacy & Consent:

- Only publicly available Instagram posts were analyzed.
- No private or direct messages were accessed.

## Data Sensitivity:

- NSFW and inappropriate content was filtered to prevent misuse.
- Media and text containing sensitive information handled cautiously.

## Bias & Fairness:

- Pretrained models may reflect cultural, gender, or racial biases.
- Interpreted sentiment/emotions responsibly.

## Responsible AI Use:

- Outputs intended for research, monitoring, or educational purposes.
- Not used for individual profiling, harassment, or discriminatory actions.

## Transparency:

- Clear documentation of models, preprocessing, and analysis steps.

# Challenges and Opportunities

---

## Challenges:

- Accessing public Instagram post data while maintaining session stability.
- Library compatibility issues (e.g., TensorFlow, OpenCV, Streamlit).
- Loading and integrating multiple pretrained models efficiently.
- Limited documentation or examples for some specialized models (NSFW detection, face emotion).
- Handling diverse media types (images, video frames, captions, comments) in a unified pipeline.

## Opportunities:

- Developing a reproducible multimodal sentiment analysis workflow.
- Exploring integration of multiple pretrained models for richer insights.
- Potential applications in social media monitoring, brand research, or digital well-being studies.
- Foundation for future research on ethical AI and content moderation.

# Conclusion

---

## Supports Ethical AI Applications

- Demonstrates **responsible and ethical AI deployment** by incorporating transparency, privacy considerations, and harm reduction in automated social media analysis.

## Advances Multimodal Research

- Contributes to the growing field of **multimodal sentiment analysis**, which is essential for building AI systems that understand human communication holistically (images + text).

## Empowers Brands and Communities

- Enables brands to monitor **public perception and community mood** more accurately, facilitating proactive engagement and ethical marketing strategies.

## Raises Awareness of The Social Dilemma

- By highlighting toxic or harmful content, your project aligns with broader societal discussions about **how social media platforms influence mental health, democracy, and well-being**.

# Conclusion

---

## Addresses Online Toxicity

- Social media platforms like Instagram can become breeding grounds for **negative sentiments, bullying, and toxic interactions**.
- Your tool provides **real-time detection and insights**, empowering users, researchers, and policymakers to **identify harmful patterns**.

## Promotes Digital Well-being

- By revealing the emotional tone of posts and comments, the tool fosters **self-awareness and healthier online engagement**, aligning with mental health promotion efforts.

# Acknowledgements

---

I would like to sincerely thank:

**My practicum professor Dr. Ghulam Mujtaba** for guidance, patience, and insightful feedback throughout this project.

**My classmates** for their constant support, encouragement, and constructive suggestions.

**My wife Ellu** for her unwavering support during late nights, troubleshooting sessions, and throughout this entire project.

Your guidance and collaboration made this work possible.
